## Noticed a possible bug with 'sendAt'

infobite

October 28, 2016 23:25

Hi, opening a ticket for this as requested on: <https://github.com/sendgrid/sendgrid-nodejs/issues/326#event-836025481>

Not entirely sure whether this is by design or an error.

### Issue Summary

When I send an email that is scheduled to be sent in the future, when it does get sent, the 'time received' on the recipient side is the date/time that the original scheduling event happened (as opposed to the time the email was actually sent).

### Example scenario

In the app I am building, I wish to remind users about an upcoming appointment, e.g 1 hour prior to the appointment time.

received it.

Just wondering if this is by design or something that can/will be fixed. If by design then I will need to do the scheduling on my end else my users are going to think that they missed their appointment due to the timestamp not adding up.

Thanks!

Hello!

Thanks for reaching out! I'll need to test this issue out on my end and I will get back to you asap.

Best,

James | Support Engineer
